The graph displays the monthly number of COVID-19 cases in the United States from 2018 to 2023. The x-axis represents time in years, with labels for 2018, 2019, 2020, 2021, 2022, and 2023. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a sharp increase in cases starting in early 2020, peaking at approximately 100,000 cases in early 2020. This is followed by a decline and then a resurgence in early 2021, with a peak of about 75,000 cases. The graph also shows smaller peaks and troughs throughout the period, with a notable peak in early 2022 and another in early 2023.

The graph illustrates the trend of COVID-19 cases in the United States over a five-year period. The data shows a period of low activity from 2018 through early 2020, followed by a rapid and sustained increase. The peak in early 2022 is the highest point recorded in the period shown. A sharp decline is visible at the beginning of 2023.

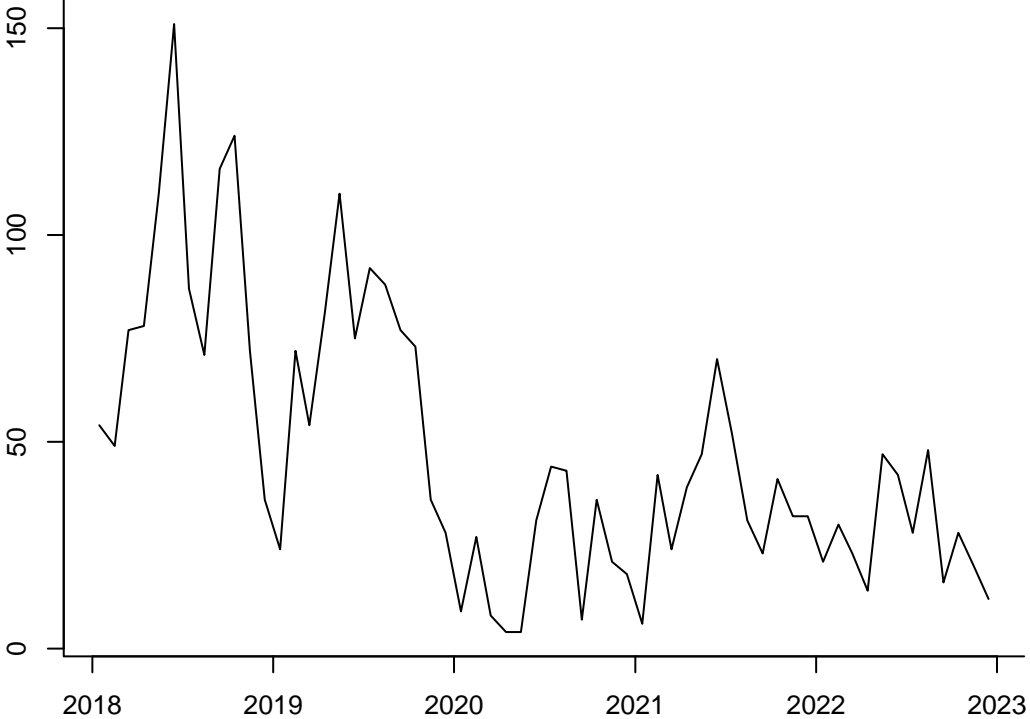

Year	Approximate Number of Cases
2018	~150
2019	~300
2020	~1,000
2021	~2,200
2022	~3,500
2023	~1,200

The graph displays the monthly number of COVID-19 cases in the United States from January 2018 to January 2023. The x-axis represents time in years, with labels for 2018, 2019, 2020, 2021, 2022, and 2023. The y-axis represents the number of cases, with horizontal grid lines indicating increasing levels. The data shows a highly volatile trend with several major peaks. The first significant peak occurs in early 2020, reaching a level above the first major grid line. This is followed by a period of relative stability with minor fluctuations. A second, even higher peak occurs in early 2021, reaching the top of the second major grid line. After a decline, a third peak is seen in early 2022, reaching a level between the first and second major grid lines. The graph concludes in early 2023 with a sharp decline, showing a level below the first major grid line.

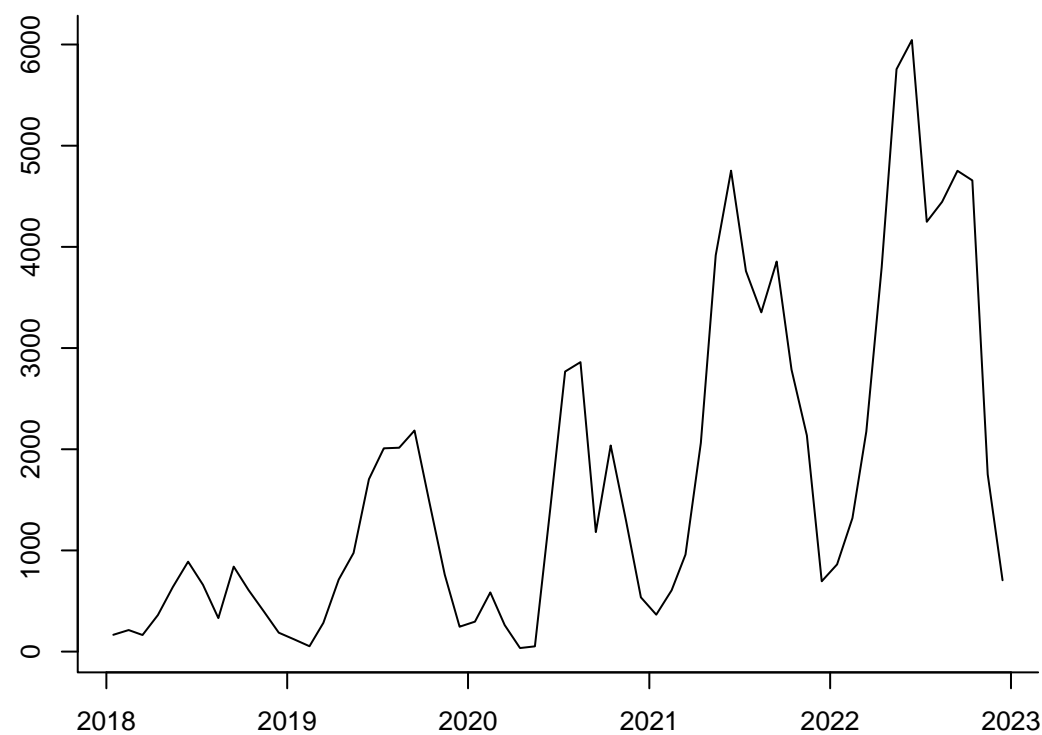

The graph illustrates the daily reported COVID-19 cases in the United States from 2018 to 2023. The y-axis represents the number of cases, ranging from 0 to over 200. The x-axis represents the year, from 2018 to 2023. The data shows a period of low activity in 2018 and early 2019, followed by a massive surge in early 2020, peaking at over 200 cases. This is followed by a sharp decline and subsequent smaller waves, with a notable peak in early 2021 and another in early 2022. The overall trend shows a significant increase in cases starting in early 2022, reaching a peak of over 200 cases in early 2023, followed by a sharp decline and subsequent smaller waves.

Year	Approximate Daily Cases
2018	~170
2019	~100
2020	~180
2021	~60
2022	~20
2023	~10
